Here's a general guide that should work for most browsers. There might be some variations, but it should be similar to one of the examples below.

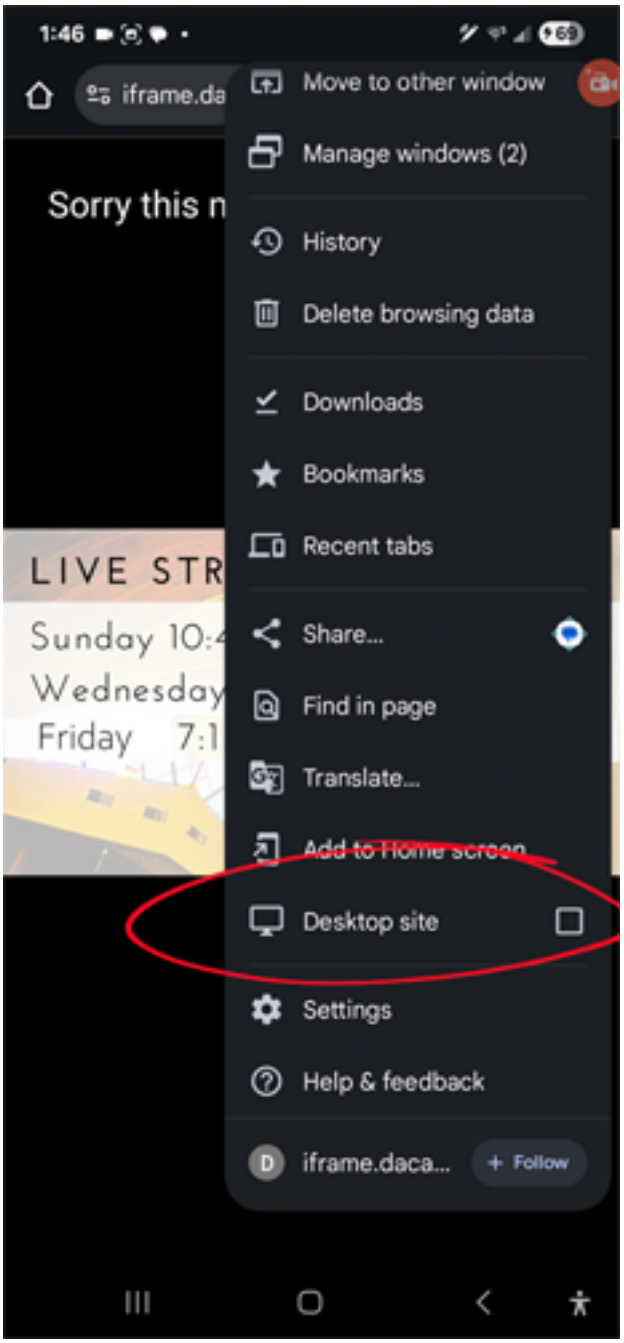

1. Open the live stream as you normally would.

2. Open your browser settings; (3 dots on top right of screen for Chrome and Google, 3 lines on bottom right of screen for Samsung Internet and Edge)

3. Locate the "Desktop Site" or "View Desktop Site" option in the settings and select it.

4. Unmute the stream with the volume button on the bottom left of the screen (you may need to tap the bottom of the screen to see the buttons appear)
